

# 2018 DataHaven Community Wellbeing Survey

## Bridgeport Crosstabs

### Results Overview

These crosstabs contain data collected through the 2018 DataHaven Community Wellbeing Survey's live, in-depth interviews with 16,043 individuals statewide, including 1,001 in Bridgeport. The survey assessed topics such as health, employment, and neighborhood resources. Respondents spanned a broad range of ages, ethnicities, and socioeconomic statuses from every Connecticut zip code, and all results are based on weighting survey data to be representative of the entire adult population (see methodology). Data collected at this level reveal local trends in quality of life, including these examples:

*Experiences with the police vary by race:* Black and Latino adults in Bridgeport are much less favorable about the police than white adults. Only 34 percent and 42 percent of black and Latino adults, respectively, said the local police are doing a good or excellent job, compared to 58 percent of white adults. This may stem from these communities' interactions with the police force: Compared to whites (12%), nearly twice as many Latino (20%) and black (23%) individuals reported they experienced unfair or abusive treatment by the police.

### Black and Latino adults view local police far less favorably

Responses to job done by local police by race; percent of Bridgeport adults, 2018

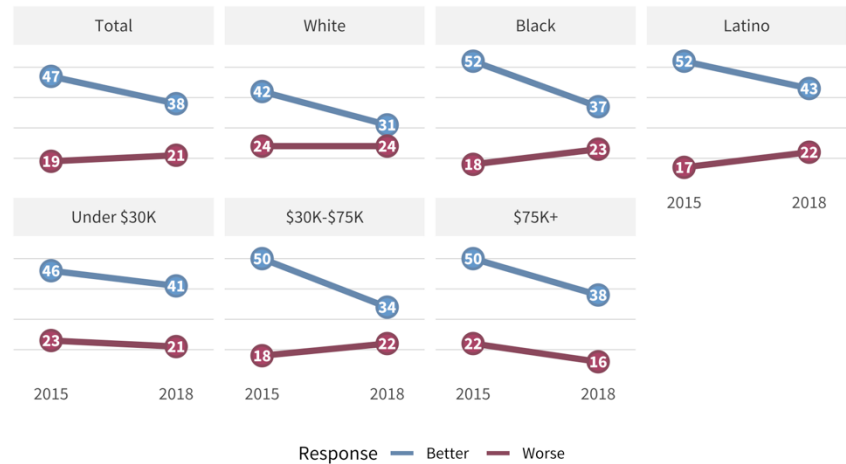

*Employment is expanding but is still less accessible for some demographics:* Only 56% of Bridgeport adults had a paid job in the last 30 days, compared to 67% in 2015. This drop mostly stems from the increase in retirees, homemakers, and students, however. The percent of Bridgeport adults reporting excellent or good access to suitable employment increased from 19% to 24% between 2015 and 2018. This trend was most noticeable in certain demographics, such as adults between 18-34 (increased from 19% to 30%), while other groups still fall behind. Only 20% of black adults in Bridgeport reported excellent or good access to suitable employment, compared to 26% of white adults and 30% of Latino adults. Additionally, 12% of black adults in Bridgeport have not held a job in the last 30 days, but want to work, compared to 7% of white adults and 10% of Latino adults.

*Neighborhood improvement is slowing:* Sixty-nine percent of Bridgeport adults are satisfied with the area in which they live. However, improvement appears to be slow: 38% percent feel that the city is getting at least somewhat better, a nine-point decrease from the 47% of Bridgeport adults who reported improvement in 2015. Bridgeport adults still appear to be more optimistic than Connecticut adults at large, though, since only 30% of adults statewide felt their hometowns were improving.

### Many adults are pessimistic about changes in their neighborhoods

Percent of Bridgeport adults reporting their area is getting better or worse by race and income, 2015-2018

*Access to food and housing is inequitable:* Food and housing insecurity burden some groups more than others: twenty-eight percent of adults reported food insecurity, a figure that diverged to 38% and 23% among adults with and without kids at home, respectively. This trend is paralleled in housing insecurity, which affects 13 percent of adults overall, but 17 and 11 percent of adults with and without kids at home, respectively.

Percent of Bridgeport adults having difficulty paying for food or housing in past year by age, income, and presence of children, 2018

## How To Read This Document

The data in these crosstabs represent question-by-question weighted estimates, disaggregated by various demographic and socioeconomic characteristics. Each estimate represents how a group of respondents—weighted to be representative of the population within the specified geographic area—answered the question shown.

Please use caution in interpreting the information here, and consider the limitations of the populations from which the data was collected. In particular, please be aware of “skip patterns” in the survey, such as “Q23E1. (If still have asthma) During the past 30 days, how often have you used a prescription asthma inhaler during an asthma attack to stop it?” Only the subset of adults who indicated in the previous two questions that they had been diagnosed with asthma and still have it would have been eligible to receive this question. Therefore, the estimates show the percentages of adults with “current asthma” who have used inhalers, not the percentages of all adults who have used them.

The number of respondents to any given question is represented by “Weighted Total.” For example, many questions were answered by all 1,001 respondents, so in the Bridgeport column you will see a Weighted Total of 1,001. But the columns for each smaller population group (e.g., adults age 18-34) or the columns for questions that were asked only to a subset of adults will have smaller weighted totals. Generally, columns with demographic breakdowns are only included when the number of respondents completing that item was at least 50. Additionally, some questions were asked to special groupings of respondents or “ballots.” Respondents were randomly-assigned to one of three statewide ballots (split 45%, 45%, and 10%) at the outset of the survey. For these questions (e.g., Q5, asked to 10% of adults, giving a Weighted Total of 111 people), weighted totals are generally smaller than they are for the questions that were asked to 100% of eligible respondents.

We recommend contacting DataHaven with any questions. DataHaven is happy to help you confirm whether the information in this document is being interpreted in a correct way, and possibly to recommend further analysis that might be useful to your work.

## Methodology

The DataHaven Community Wellbeing Survey was designed by DataHaven in consultation with over 100 local, statewide, and national survey research experts and local partners, in many cases drawing upon questions commonly used in other surveys.

On behalf of DataHaven, the Siena College Research Institute (SRI) conducted the survey of 16,043 residents of the state of Connecticut, including 1,001 in Bridgeport (additional surveys were also completed in parts of New York State, but are not included in these estimates). Surveys were conducted from March 6 through November 29, 2018. Residents age 18 and older were interviewed from all 169 towns in Connecticut. Interviews were conducted in English and Spanish. The overall Connecticut sample of 16,043 and the Bridgeport sample of 1,001 were weighted by age, gender, reported race, and geography to ensure that they were statistically representative of the area’s demographics. In addition to demographic parameters, the samples were also weighted

to match current patterns of telephone status (landline only, cell phone only or both), based on the state-level estimates from the National Health Interview Survey.

Respondents were contacted via landline or cell phone. To ensure the selection of both listed and unlisted telephone numbers, the design of the sample incorporated random digit dialing (RDD). The cell phone sample was drawn from a sample of dedicated wireless telephone exchanges from within Connecticut. Approximately 1/3 of residents completed the survey on a cell phone. In addition to the traditional RDD samples for landline and cell, we augmented the sample using a stratified sampling technique. These stratified samples maintained RDD for both landline and cell but used information from the U.S. Census so as to enhance the composition of the sample, including targeted regions, urban centers, and high concentrations of minority populations. The primary supplier of the RDD landline and cell phone samples was Survey Sampling International (SSI) of Shelton, Connecticut. Additionally, for the cell phone sample we utilized SSI’s Wireless LITe database which uses billing address to enable the targeting of cell phone sample by region or zip code. This database also permitted the inclusion of non-Connecticut telephone numbers as someone may have moved and their billing address is in the area but their cell phone number is not a ‘typical’ Connecticut telephone number (i.e., not a 203, 860 area code). All of these respondents were screened by live interviewers to confirm their residence in a qualifying town and zip code before interviews continued.

## Reported Margins of Error

Margins of error are shown at the top of the crosstab. The “maximum” margin of error for the Bridgeport sample of 1,001 adults is +/- 4.0% with a 95% confidence interval, including the design effects resulting from weighting. This means that in 95 out of every 100 samples of the same size and type, the results that we obtain would never vary by more than plus or minus 4.0 percentage points from the result that we would get if we could interview every single member of the adult population of Connecticut. This maximum margin of error applies when an observed percentage is 50%, and the margin of error becomes smaller as the percentage approaches the extremes of 0% or 100%. Margins of error are higher for small geographic or population groups.

## Contact Us

As a non-profit organization with a 25-year history of public service to Connecticut, DataHaven has a mission to help drive community action that improves quality of life. One way of doing so is by ensuring that data from this survey, as well as from other public data sources, are useful and accessible to the public. Contact us via email at [info@ctdatahaven.org](mailto:info@ctdatahaven.org) or via our website (<http://ctdatahaven.org/contact>). Extensive additional survey results are posted on our website.

The next group of questions is about your neighborhood, that is, the area around your home that you could walk to in 10 or 15 minutes or that area you consider to be your neighborhood. How much do you agree or disagree with each statement?  
 Many stores, banks, markets or places to go are within easy walking distance of my home.

I have a few questions about prescription painkillers. When we ask about prescription painkillers, we mean strong ones, sometimes called opioids, such as Percocet, OxyContin or Vicodin. Let me remind you that this is a completely confidential interview. Do you personally know anyone who has struggled with misuse or addiction to heroin or other opiates such as prescription painkillers at any point during the last 3 years?
